April 17, 2023

Dear Assemblymember Burdick and Senator Harckham:

The Empire State Forest Products Association (ESFPA) has concerns with A. 5949/S.5947 which enable local governments to prohibit the application of pesticides to certain local freshwater wetlands where local governments have implemented a freshwater protections law.

The Empire State Forest Products Association (ESFPA) represents over 350 member businesses, industries and landowners engaged in forest resource production and stewardship of New York's 19 million acres of forest. In total, \$22.9 billion dollars in annual industry production and nearly 100,000 jobs are attributable to operations of various industries within the forest related sectors. Over 200,000 private forest landowners depend on wood product markets to provide a return of investment on their forests lands which in turn enable them to keep their forests forest and steward their lands in ways that benefit all New Yorkers.

Article 24 of the Environmental Conservation Law (ECL), the Freshwater Wetlands Act, provides for a delegatory scheme to allow local governments to enact local freshwater wetlands regulations and seek delegation of permitting authority from the Department of Environmental Conservation. This delegatory scheme is for the regulation of freshwater wetlands and not for the regulation of pesticides. Article 33 of the ECL, Pesticides, provides for the registration, commercial use, purchase, and custom application of pesticides (insecticides, fungicides, and herbicides). Article 33 is pre-emptive of delegation and does not contemplate local regulation.

Specifically, under Environmental Conservation Law Article 33:

§ 33-0303. Powers and duties of the commissioner and the department.

1. Jurisdiction in all matters pertaining to the distribution, sale, use and transportation of pesticides, is by this article vested exclusively in the commissioner.

With over 1,500 cities (61), towns (933), villages (534) and counties (57) in New York this legislative delegatory scheme could result in a patchwork of regulation of pesticides and a regulatory nightmare for responsible use, application, and sale of pesticides throughout the State.

This legislation could also put at risk the delegation under the Federal Insecticide, Fungicide, and Rodenticide Act, known as FIFRA. Under FIFRA the federal and state governments have express authority to regulate pesticides. The U.S. Supreme Court has ruled that FIFRA does not prevent local regulation of pesticides, as long as local regulation is allowed by the state. The preemptive language of Article 33 would prohibit delegation of pesticide regulation from the state. If Article 33 is undermined it could undermine the EPA delegation.

This legislation, as well as several other bills before the New York Legislature relating to the control or prohibition of certain herbicides and pesticides, circumvents the rigorous technical and scientific review process that exists in New York. It also sets a precedent to make such decisions regarding the labeling, packaging, storage, use and application of pesticides and herbicides in the political realm as opposed to by the experts in the scientific and technical fields.

ESFPA supports efforts to address environmental and public health issues posed by an ever-increasing number of products that may harm the environment or the public. No professional forester or forest landowner takes the use of pesticides or herbicides lightly. They are expensive and we have an ethical responsibility to use these products prudently and responsibly. What we cannot have is a labyrinth of regulatory structures to go through and manage.

While we appreciate the amendments to this legislation in containing provision allowing the State to override a local prohibition of the application of certain aquatic pesticides, in the event such application is necessary to control a public health outbreak of West Nile virus, Zika virus, malaria, Eastern equine encephalitis, or other dread disease, as well as in controlling invasive species and noxious weeds, more needs to be done.

For the above stated reasons, we cannot support this legislation as drafted. We would be happy to discuss amendments that could make this legislation supportable.

cc: Assembly Environmental Conservation Committee Members
Senate Environmental Conservation Committee Members
